Important Screening

Mammograms are a covered benefit

Mammogram screenings help detect breast cancer, even when you don't have any symptoms. The recommended frequency for mammogram screenings is below.

- **High risk** — upon physician recommendation (for people with a family history of breast cancer, such as their mother or sister)
- **31–50 years** — every 1 to 2 years starting at age 40
- **51 and older** — every 1 to 2 years

If you're due to get one, don't wait. Schedule this important screening today. It has saved the lives of hundreds of thousands of women. It could save your life, too!

Knowing how your breasts normally look and feel can help you notice symptoms of breast cancer. Possible signs include lumps, pain or changes in size. To learn how you can do a breast self-exam at home, visit uhc.care/healthtalkexam.

Annual Wellness Visit

Health in your hands

Annual wellness visits are important for good health

Preventive care tells you about your health before it gets bad. It is a covered benefit under your health plan. It includes regular visits to your primary care provider, screenings and vaccines.

All members of your family should see their primary care provider once a year for an annual wellness visit. These visits keep your family healthy. They can find and prevent problems before they happen.

Visit myuhc.com/communityplan to find a provider.
